anthony.matignon@gmail.com

Web developer with nearly 10 years of experience, I began my career mastering the fundamentals of web development such as HTML, CSS, and JavaScript. I quickly expanded my skills by integrating PHP and Symfony, while continuing to evolve in front-end development. Over the years, I refined my front-end expertise, which led me to a position dedicated to front-end development.
Passionate about innovation, I like to be involved from the very beginning of the feature-building process to offer technical solutions that align with product needs.

Technologies

Front-end

React 4 years	Playwright 1 year	Tailwind 3 years
Svelte 4 years	TansStack Query 3 years	Vite 3 years
HTML 10 years	CSS 10 years	Javascript 10 years

Back-end

PHP 10 years	Symfony 8 years	Go 8 months
Node 6 years	S3 Storage 2 years	Docker 5 years
MySQL 10 years	PostgresQL 4 years	Redis 3 years
Sveltekit 3 years	Nest.js 1 year	Next.js 1 year

CI/CD

Github Actions 3 years	GitLab CI/CD 2 years	Coolify 1 year
Dokploy 1 year		

Career

Senior Developer React - Symfony, 09/2023

Zei, Remote, Paris - Permanent

SAAS for CSR.
The main mission is to update the entire front end (Symfony/jQuery/React) and develop new features.
Important points
• Custom reports, data consolidation, manage of CSR indicators.
• Add Tailwind and migrate legacy code.
• Migration from Webpack to Vite
• Add e2e test (Playwright)

Advéo France, Villepinte - Fixed-term

Setting up an e-commerce site showcase for the Buro+, PleinCiel and Calipage stores.
Website design and animation.
Technologies used: HTML, CSS, JS

Personal Projects

Coaching App - Sveltekit

Application Website for a Crossfit box.
The main purpose is to allow Athletes to subscribe to the class of the Crossfit.
It also allows people to buy tickets or single drop-in for some classes.
The Coach (admin) can also add some custom programs.
Important points
• Sveltekit app
• Cache for complex calendar with recursive events
• Payment for Programs and drop-in through Stripe

Automate Database Dump - Sveltekit

For personal use only, I created a Sveltekit app to allow to create dumps of databases (Postgresql, Mysql, MongoDB).
It takes configuration for creds (securely stored) and also for S3 Storage.
Every day a dump is uploaded to the S3 Storage with a number of saves we want to keep.
Important points
• BullMQ (with Redis) for cron-like features
• UI with shadcn
• Securely stored config in a sqlite bdd
• Deployment with a custom Docker image

NTFY UI - Sveltekit

Web UI for the NTFY service.
Main features :
• SSR Events from the NTFY socket to display new messages
• Allow web push notification directly on Phone
• Markdown support
• Subscribe / Unsubscribe to topics easily
• Web UI with Shadcn svelte
• Docker Image with tag versioning (to ease deployment)
